PROFILE

Malaysian Electrical & Computer Engineering student (Data Science minor) at SJTU with full-stack AI experience – shipping AI-powered products (100+ users on LaowaiCentral) and engineering the ML/NLP pipelines underneath them. Proven leader and cross-functional collaborator: co-founded and led engineering teams, and mentored 300+ students as a 5x award-winning TA.

EDUCATION

Shanghai Jiao Tong University <i>B.S Electrical & Computer Engineering – Minor in Data Science</i>	09/22 – 08/26 <i>Shanghai, China</i>
• <u>Coursework</u> : Data Science with Python, Data Science Computation Methods, Computer Vision, Entrepreneurship	
Nanyang Technological University <i>Electrical & Computer Engineering (Student Exchange Program)</i>	08/22 – 12/22 <i>Singapore</i>

WORK EXPERIENCE

LaowaiCentral: SJTU International Events Platform <i>Co-founder</i>	04/26 – Present <i>Shanghai, China</i>
• Co-founded and led engineering for an event-discovery platform solving the lack of an aggregated events source for SJTU's international student community; grew to 100+ users with 30% user retention .	
• Built an NLP pipeline for content moderation, event/non-event classification (95% accuracy), and English summarization.	
• Created an image processing workflow with VLM models, increasing categorization accuracy of WeChat articles by 80% .	
Moham Labs (森翰数字科技) <i>Frontend Machine Learning Engineer</i>	10/24 – 02/25 <i>Shanghai, China</i>
• Developed the UI/UX for an agentic AI chatbot system with .NET WPF, integrating it into an existing prototype.	
• Architected Supervisor/Worker workflows with LangGraph to coordinate specialized AI tools for BIM tasks and introduced AI-assisted functions in Autodesk Revit.	

PROJECTS

Quantization-Aware Compression of Vision-Language Models	05/26 – Present
• Built a pipeline in PyTorch to compress large VLM models, making it run efficiently on edge devices, and tested it across multiple compression levels on CIFAR-100 and Flickr30k datasets.	
• Designed a compression strategy that shrank the model by 46% while nearly tripling accuracy compared to a basic compression approach (21.8% to 59.4%).	
• Applied a retraining step to recover accuracy lost during compression, boosting performance from 21.8% to 74.8% .	
Fake News Article Detection Model with Interactive UI Dashboard	09/25 – 12/25
• Processed 80K+ data samples via TF-IDF, achieving a 97% weighted accuracy in fake news detection.	
• Build interactive visual dashboards using Shiny to support model prediction monitoring and dynamic data queries.	
USA Cook County Housing Price Prediction Model	07/25 – 08/25
• Built a Linear Regression housing price prediction model with Feature Engineering on 200K+ training samples.	
• Achieved a RMSE of 0.41 , ranking top 15 in a competitive model performance evaluation.	

AWARDS

SJTU-GC Outstanding Teaching Assistant Award	02/24 – 12/25
• Recognized for teaching quality with the Outstanding TA Award 3 times and the Excellent TA Award 2 times.	
1st Prize in China's 13th National Marine Vehicle Design Competition	09/23 – 08/24
• Led the design and development of a vehicle for cave exploration and flood rescue scenarios as part of a 4-person team.	

SKILLS

Languages: English (Fluent), Chinese (Fluent), Malay (Intermediate), Cantonese (Intermediate)

Programming Languages: Python, R, C, C++, C#, JavaScript, TypeScript, SQL, MATLAB, Verilog, Assembly, HTML/CSS

AI Tools: Claude Code, Cursor, API Calling, LLM Prompt Engineering, Tool Calling, LangGraph, VLM

Developer Tools: Git, Github, Postman, Docker, Overleaf (LaTeX), Linux, PostgreSQL, NumPy, Scikit-learn, Matplotlib, Jest
